The advent of coronavirus has threatened almost every job industry operating in the U.S. This has further affected the job market worldwide while creating a sense of fear among employees. Fortunately, the life sciences industry seems to be immune to the pandemic woes. The global deals within this sector accounted for $467 billion from 2013 to 2020.
EPM Scientific surveyed to analyze the current situation of the life sciences job market in the U.S. When asked about the level of job satisfaction, 50% of U.S. respondents revealed positivity towards their job security. They’re likely to stay in their current jobs for at least six months.

The life sciences industry and the job market

There’s no doubt that the economic outlook might be gloomy for all industries. The same is true for th...

Challenges in Life Sciences: What 2020 Meant for This Industry

Articles Diana Rangaves, PharmD
When we compare life sciences and healthcare to other industries, the strategy in the former is much more fragmented. The pricing practices are also relatively unbalanced while the product cycle is quite long as well.
